Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```
The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, Immunosuppressant and cytostatic activity. The polymucleotides are useful in gene therapy. A composition containing a polypeptide or polymucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system diseases, such as localised neuropathies and central nervous system diseases, such as latheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, activity, chemotextic/chemokinetic activity, haemostatic and thrombolytic activity, chemotextic/chemokinetic activity, haemostatic and thrombolytic activity, arthritis and inflammation, leukaemias and c.N.S disorders.
                                                                                                                                                                                                             ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         244
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            124

The invention relates to a method for screening biologically active agent that modulates cancer associated protein kinase function. The invention also relates to a method for diagnosing cancer comprising determining the upregulation of expression of a nucleic acid sequence encoding a protein kinase. The method is useful for diagnosing cancer. A protein kinase is useful for screening biological agents that modulate cancer associated protein kinase function. Downregulating the activity of protein kinase is useful for inhibiting the growth of a cancer cell, e.g. liver or colon cancer. A nucleic acid encoding protein kinase is useful to screen biopsy cancer. A nucleic acid encoding protein kinase is useful to screen biopsy cancer. A nucleic acid encoding protein kinase is useful to screen biopsy amplified DNA in the cell or increased expression of corresponding mRNA amplified DNA in the cell or increased expression of corresponding mRNA corp is a molecular weight, amino acid and nucleotide sequences between the two cells. The present sequence is human calmodulin kinase CAMK-XI gene corp.
                                                                                                                                                                                                                                                                                                           Human; cytostatic; antisense gene therapy; screening; protein kinase;

immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic atteral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        140

Polynucleotides encoding diagnostic and therapeutic proteins, e.g. enzymes, hormones and receptors, useful in diagnostics and therapeutics

Claim 1; Page 310-311; 522pp; English.

The invention relates to polynucleotides (I) encoding diagnostic and therapeutic (DTHP) polypeptides (II), which include e.g. enzymes, and proteins involved in growth and development and receptors. (I) and (II) may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate DTHP expression. For example, (I) and (II) may be used to treat disorders associated with decreased polypeptide expression by rectifying mutations or deletions in a patient's genome,

that affect the activity of the DITHPS, by expressing inactive proteins or supplementing the patient's own production of them. (1) and (11) may be used to treat diseases, for example, cell proliferative disorder, crohn's disease, acquired immune deficiency syndrome (AIDS). Jumphoma, leuwaemia, autoimmune disorders, and respiratory disorders. Additionally, (1) may be used to produce the DITHPS, by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (1) and its complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therefore which patients may be in need of restorative careapy. (11) may also be used as antipodies and antagonists may also be used as diagnostic agentify modulators of DITHP expression and activity. The anti-DITHP antibodies and antagonists may also be used as diagnostic agents for detecting the presence of DITHPP is samples (e.g. by enzyme linked immunosorbant assay (ELISA)). AAS30986-AAS31196 represent human diagnostic and therapeutic (DITHP) polynucleotides of the invention. 828888888888888888888888

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ŏ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to human kinases (PKIN) and the nucleic acids encoding them. PKIN is used as vaccine and in gene therapy. PKIN is used in the prevention, diagnosis and treatment of diseases cancers, adenocarcinoma, leukaemia, sarcoma, immune disorder, Addison's disease, adenocarcinoma, leukaemia, sarcoma, immune disorder, Addison's disease, adenocarcinoma, leukaemia, sarcoma, immune disorder, Addison's disease, advorable inflammation, myasthenia gravis, cardiovascular disease and/or inflammation, myasthenia gravis, atherosclerosis, cirrhosis, osteoporosis, myocardial infarction, cataract, growth and development disorder, seizure disorder, pulmonary embolism, Gaucher's disease, lipid disorder, ilpid storage disease, plick's disease, Tay-Sachs disease, renal disease and obesity. PKIN may be used to treat disorders associated with decreased PKIN capterssion by rectifying mutations or deletions in a patient's genome that affect the activity of PKIN by expressing inactive proteins or to supplement the patients own production of PKIN PKIN nucleic acids may be used to produce the PKIN POlypeptide, by inserting the nucleic acids may be used and its complementary sequences may also be used as DNA probes in considering and consider and quantitate the presence of similar and considering the cell and quantitate the presence of similar and considering the cell and quantitate the presence of similar and considering the cell and quantitate the presence of similar and considering the cell and quantitate the presence of similar and considering the cell and quantitate the presence of similar and considering the cell and quantitate the presence of similar and considering the cell and quantitate the presence of similar and considering the cell and quantitate the presence of similar and considering the cell and quantitate the presence of similar and considering the cell and quantitate the presence of similar and considering the cell and quantitate the presence of similar and considering the cell and considering the ce
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      acid sequences in samples and therefore which patients may be in restorative therapy. The present sequence is human PKIN-2 cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Yue H, Gandhi AR, Tribouley CM, Kearney L, Griffin JA, Nguyen DB;

Inappropriate kinase expression. For example, they may be used to treat cancers (especially cancers of haematopoietic origin), cardiovascular disease (e.g. atherosclerosis), metabolic disorders (e.g. diabetes), immune related diseases (e.g. rheumatoid arthritis), neurological disorders (e.g. schizophrenia), neurodegenerative disorders (e.g. dathana), inflammatory disorders (e.g. asthana), infectious disease (e.g. HIV) and reproductive disorders (e.g. infectious Additionally, polynucleotides encoding protein kinases may be abed for gene therapy and as DNA probes in diagnostic assays.

The protein kinase polypeptides may be used as antigens in the production of antibodies against the protein kinases and in assays to identify
                                                                        AASO6701-AASO6757 encode for novel human protein kinases #1-57. The novel protein kinases have been identified as members of the tyrosine or serine/threonine kinase (PTK and STK) families. The polynucleotides encoding protein kinases and the polypeptides may be used in the prevention, diagnosis and treatment of diseases associated with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    178

The present sequence encodes a kinase polypeptide. The kinase polynucleotides and polypeptides are useful in therapeutic, diagnostic and pharmacogenic applications. They are useful for the detection of mutant kinases, or inappropriately expressed kinases for the diagnosis of a disease or disorder. They are useful for screening for drugs (or high throughput screening of combinatorial libraries) effective in the treatment of symptomatic or phenotypic manifestations of that disease or disorder. The polynucleotide sequence is useful as a source of probes and primers, which can be used to screen libraries, isolate

The present sequence encodes a kinase polypeptide. The kinase polynucleotides and polypeptides are useful in therapeutic, diagnostic and pharmacogenic applications. They are useful for the detection of mutant kinases, or inappropriately expressed kinases for the diagnosis of a disease or disorder. They are useful for screening for drugs (or high throughput screening of combinatorial libraries) effective in the treatment of symptomatic or phenotypic manifestations of that disease or disorder. The polynucleotide sequence is useful as a source of probes and primers, which can be used to screen libraries, isolate clones, and prepare cloning and sequencing templates.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel isolated human kinase polynucleotide that shares structural similarity with animal kinases including calcium/calmodulin-dependent protein kinases and serine/threonine protein kinases, useful in

The polypeptide is useful for treating diseases such as nervous disease, arrhythmia, tumour and growth development disturbance disease. The present sequence represents the human CaM kinase I 39.05 polypeptide encoding CDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           MetGlyArgLysGluGluAspAspCysSerSerTrpLysLysGlnThrThrAsnIleArg 20

Human kinases and nucleic acids, useful for preventing diagnosing and treating cancers, inflammation and immune disorders –

Claim 5; Page 159; 166pp; English.

cids encoding them. PRIN is used as vaccine and in gene therapy. PRIN is used in the prevention, diagnosis and treatment of diseases cancers, adecorationan, leukaemia, sarcoma, immune disorder, Addison's disease, adecorationan, leukaemia, sarcoma, immune disorder, Addison's disease, adenoration deficiency syndrome (AIDS), anaemia, asthma, allargies, gout, microbial infections, cardiovascular disease and/or inflammation, infarction, cataract, growth and development disorder, seizure disorder, plumonary embolism, Gaucher's disease, lipid disorder, ipid storage disease, plck's disease, Tay-Sachs disease, renal disease and obesity. PRIN may be used to treat disorders associated with decreased PRIN expression by rectifying mutations or deletions in a patient's genome that affect the activity of PRIN by expressing inactive proteins or to used to produce the PRIN polypeptide, by inserting the nucleic acids into a host cell and culturing the cell to express the protein. PRIN nucleic acids and its complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acid sequences in samples and therefore which patients may be nucleic acid sequences in samples and therefore which patients may be nucleic acid in need of restorative therapy. The present sequence is human PRIN-11 The present invention relates to human kinases (PKIN) and the nucleic

                                                                                                                                                                                                                                                                                                                                                           The present sequence encodes a kinase polypeptide. The kinase polynucleotides and polypeptides are useful in therapeutic, diagnostic and pharmacogenic applications. They are useful for the detection of mutant kinases, or inappropriately expressed kinases for the diagnosis of a disease or disorder. They are useful for screening for drugs (or high throughput screening of combinatorial libraries) effective in the treatment of symptomatic or phenotypic manifestations of that disease or disorder. The polynucleotide sequence is useful as a source of
                                                                                                                                                                                                                                                                                        Novel isolated human kinase polynucleotide that shares structural similarity with animal kinases including calcium/calmodulin-dependent protein kinases and serine/threonine protein kinases, useful in

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous localised neuropathkes and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic
                                                                                                                                         Human; nootropic; immunosuppressant; cytostatic; gene therapy; cancer; peripheral nervous system; neuropathy; central nervous system; CNS; Alzheimer's; Parkinson's disease; Huntington's disease; haemostatic; amyotrophic lateral sclerosls; Shy-Drager Syndrome; chemotactic; chemokinetic; thrombolytic; drug screening; arthritis; inflammation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ä

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM3642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the
                                                                                                    Human; nootropic; immunosuppressant; cytostatic; gene therapy; cancer; peripheral nervous system; neuropathy; central nervous system; CNS; Alzheimer's; Parkinson's disease; Humrington's disease; haemostatic; amyotrophic lateral sclerosis; Shy-Drager Syndrome; chemotactic; chemokinetic; thrombolytic; drug screening; arthritis; inflammation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ä

The present sequence is the coding sequence for Murine Dendritic Cell Kinase 3 (MDCK-3). The protein encoded by the present sequence is useful for treating a variety of disorders listed in the disclosure of the specification, including autoimmune disorders, allergic reactions, myeloid or lymphoid cell deficiencies, wound healing and tissue repair and replacement, burns, inclisions and ulcers, periodonical disease, inflammatory diseases, tumours and bacterial, viral or fungal infection. MDCK-3 is a member of the Ca2+/calmodulin-dependent kinase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    inflammations, infections, tumors, allergies, autoimmune diseases, and for stimulating or suppressing immune responses

They are also used in diagnosing a pathological condition or susceptibility to a pathological condition. The DDCR protein and its antibodies are used in the diagnosis and treatment of disorders such as immunodeficiency diseases (e.g. Acquired immune deficiency such as immunodeficiency diseases (e.g. Acquired immune deficiency syndrome (AIDS), leukaemia) autoimmune diseases (e.g. systemic lupus erythematosus, rheumatoid arthritis), hyperproliferative disorders (e.g. neoplasms of the breast or liver), cerebrovascular disorders (e.g. cardiac arrest), neurodegenesis), cardiovascular disorders (e.g. cardiac arrest), neurodegeneative diseases (e.g. Alzheimer's disease, Parkinson's disease), ocular disorders (e.g. corneal infection), degenerative diseases (e.g. spinal muscular atrophy-SMA), cancer, aberrant apoptosis, disorders of the placenta or uterus and infections caused by bacteria, viruses and fungi. The DDCR proteins to prevent skin aging due to sunburn, to maintain organs before transplantation, to support cell culture of primary tissues, to regenerate tissues and in chemotaxis. The DDCR sequences are used in correcting aberrant cellular apoptosis by gene therapy.

The present sequence is human death domain-containing receptor (DDCR) CDCR) CDNCR (CDNCR) CDNCR) CDNCR (CDNCR) CDNCR)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          105

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                         that modulates cancer associated protein kinase function. The invention also relates to a method for diagnosing cancer comprising determining the upregulation of expression of a nucleic acid sequence encoding a protein kinase. The method is useful for diagnosing cancer. A protein kinase is besful for screening biological agents that modulate cancer associated protein kinase function. Downregulating the activity of protein kinase is useful for inhibiting the growth of a cancer cell, e.g. liver or colon cancer. A nucleic acid encoding protein kinase is useful to screen biopsy derived tumours and inflammatory samples such as arthritic synovium, for amplified DNA in the cell or increased expression of corresponding mRNA or protein and is also useful to detect differences in expression levels such as molecular weight, amino acid and nuclectide sequences between the two cells. The present sequence is human calmodulin kinase, CAMK-XI.
                                                                                                                              The invention relates to a method for screening biologically active agent
                                          comprises determining the upregulation of expression sequence encoding a protein kinase or upregulation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          RDSSLENEIAVLKKIKHENIVTLEDIYESTTHYYLVMQLVSGGELFDRILERGVYTEKDA 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with noctropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system, asch as peripheral nervous system diseases, aumoropathy and localised neuropathies and central nervous system diseases, aumorrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic assays for receptor activity, arthritis and inflammation, leukaemias and constants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Note: The sequence data for this patent did not form part of the printed specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     RDSSLENEIAVLKKIKHENIVTLEDIYESTTHYYLVMOLVSGGELFDRILERGVYTEKDA 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              the invention relates to polynucleotides (I) encoding diagnostic and therapeutic (DITHP) polypeptides (II), which include e.g. enzymes, and proteins involved in growth and development and receptors. (I) and proteins involved in the prevention, diagnosis and treatment of diseases associated with inappropriate DITHP expression. For example, (I) and corporated disorders associated with decreased polypeptide expression by rectifying mutations or deletions in a patient's genome, that affect the activity of the DITHPS, by expressing inactive proteins or supplementing the patient's own production of them. (I) and (II) may be used to treat diseases, for example, cell proliferative disorder, crohn's diseases, acquired immune deficiency syndrome (AIDS). Immphoma, leukaemia, autoimmune disorders, and respiratory disorders. Additionally, (I) may be used to produce the DITHPS, by inserting the nucleic acids in the complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in

samples, and therefore which patients may be in need of restorative therapy. (II) may also be used as antigens in the production of antibodies against DITHPs and in assays to identify modulators of DITHP expression and activity. The anti-DITHP antibodies and antaqonists may also be used to down regulate expression and activity. The anti-DITHP antibodies may also be used as diagnostic agents for detecting the presence of DITHPs in samples (e.g. by enzyme linked immunosorbant assay (ELISA)). Adul9415-Adul9625 represent human diagnostic and therapeutic (DITHP) polypeptides of the invention.

PRIN is used as vaccine and in gene therapy. PRIN is used in the prevention, diagnosis and treatment of diseases cancers, adenoma, leukaemia, sarcoma, immune disorder, Addison's disease, adenoracrinoma, leukaemia, sarcoma, immune disorder, Addison's disease, adenoracrinoma, leukaemia, sarcoma, immune disorder, Addison's disease, cut, microbial infections, cardiovascular disease and/or inflammation, myasthenia gravus, atherosclerosis, cirrhosis, osteoporosis, myocardial infaction, cataract, growth and development disorder, ipid storage disease, pick's disease, lay-Sachs disease, renal disease and obesity. PRIN may be used to treat disorders associated with decreased PRIN expression by rectifying mutations or deletions in a patient's genome that affect the activity of PRIN by expressing inactive proteins or to supplement the patients own production of PRIN. PRIN nucleic acids may be used to produce the PRIN polypeptide, by inserting the nucleic acids into a host cell and culturing the cell to express the protein. PRIN nucleic acids and its complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar cut are dof restorative therapy. The present sequence is human PRIN-11
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   5

the encoded polypeptides (AAAA3213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Perkinson's disease, Hutington's disease, amyotrophic utilisation of the activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      C.N.S disorders.
Note: The sequence data for this patent did not form part of the printed

The polypeptide is useful for treating diseases such as nervous disease, arrhythmia, tumour and growth development disturbance disease. The present sequence represents the human CaM kinase I 39.05 polypeptide.

   RESULT
                                                                        The present invention relates to numen kinases (FALM) and the nucleic used in the prevention, diagnosis and treatment of diseases cancers, adenocarcinoma, leukaemia, sarcoma, immune disorder, Addison's disease, adenocarcinoma, leukaemia, sarcoma, immune disorder, Addison's disease, adenocarcinoma, leukaemia, sarcoma, immune disorder, Addison's disease, cquir, microbial infections, cardiovascular disease and/or inflammation, mysthenia gravis, atherosclerosis, cirrhosis, osteoporosis, myocardial infarction, cataract, grower's disease, inpid disorder, iseizure disorder, pulmonary embolism, Gaucher's disease, renal disease and obesity. PKIN may be used to treat disorders associated with decreased PKIN expression by rectifying mutations or deletions in a patient's genome that affect the activity of PKIN by expressing inactive proteins or to supplement the patients own production of PKIN PKIN moleic acids may be used to produce the PKIN polypeptide, by inserting the nucleic acids into a host cell and culturing the cell to express the protein. PKIN nucleic acids and its complementary sequences may also be used as DNA probes in nucleic assays to detect and quantitate the presence of similar nucleic acid sequences in samples and therefore which patients may be in the protein and its complementary sequences may also be used as DNA probes in canded acid sequences in samples and therefore which patients may be in a protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     5

The polynuclectides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Note: The sequence data for this patent did not form part of the printed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Wang D;

```
The present sequence represents a kinase polypeptide. The kinase polynucleotides and polypeptides are useful in therapeutic, diagnostic and planmacogenic applications. They are useful for the detection of mutant kinases, or inappropriately expressed kinases for the diagnosis of a disease or disorder. They are useful for screening for drugs (or high throughput screening of combinatorial libraries) effective in the treatment of symptomatic or phenotypic manifestations of that disease or disorder. The polynucleotide sequence is useful as a source of probes and primers, which can be used to screen libraries, isolate clones, and prepare cloning and sequencing templates.
                                                                                                                                                                                         240
                                                                                                             178

                                                                                                                                                                                                                                                                                                                                                                                        δ
                                                                                                                                                                                                   5
prevention, diagnosis and the polypeptides may be used in the prevention, diagnosis and treatment of diseases associated with langpropriate kinase expression. For example, they may be used to treat cancers (especially cancers of haematopoletic origin), cardiovascular disease (e.g. atherosclerosis), metabolic disorders (e.g. diabetes), immune related diseases (e.g. rheumatoid arthritis), neurological disorders (e.g. schizophrenia), neurodegenerative disorders (e.g. parkinson's disease), inflammatory disorders (e.g. asthma), infectious disease (e.g. HVV) and reproductive disorders (e.g. infertility). Used for gene therapy and as DNA probes in diagnostic assays. The protein kinase polypeptides may be used as antigens in the production of antibodies against the protein kinases and in assays to identify

                                                                                                                                                                                    The present sequence is Murine Dendritic Cell Kinase 3 (MDCK-3). This protein is useful for treating a variety of disorders listed in the disolosure of the specification, including autoimmune disorders, allergic reactions, myeloid or lymphoid cell deficiencies, wound healing and tissue repair and replacement, burns, incisions and ulcers, periodontal disease, inflammatory diseases, tumours and bacterial, viral or fungal infection. MDCK-3 is a member of the Ca2+/calmodulin-dependent kinase
Novel murine and human kinase nucleic acids useful for treating inflammations, infections, tumors, allergies, autoimmune diseases, and for stimulating or suppressing immune responses
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              238

                                                                                                                                                                             The present sequence represents a kinase polypeptide. The kinase polymoral confides and polypeptides are useful in therapeutic, diagnostic and pharmacogentc applications. They are useful for the detection of mutant kinases, or inappropriately expressed kinases for the diagnosis of a disease or disorder. They are useful for screening for drugs (or high throughput screening of combinatorial libraries) effective in the treatment of symptomatic or phenotypic manifestations of that disease or disorder. The polymucleotide sequence is useful as a source of probes and primers, which can be used to screen libraries, isolate clones, and prepare cloning and sequencing templates.
                                                                                                          Novel isolated human kinase polynucleotide that shares structural similarity with animal kinases including calcium/calmodulin-dependent protein kinases and serine/threonine protein kinases, useful in
                                                                                                                                                                                                                                                                                                                                                                                                                                    178

given in the specification). The sequences were isolated from cDNA libraries prepared from various human tissues. The PHSP proteins are useful for the diagnosis, treatment and prevention of proliferative disorders, immune disorders and neuronal disorders. The PHSP proteins form pharmaceutical compositions which useful for treating or preventing disorders associated with decreased PHSP expression/activity. PHSP antagonists are useful for treating or preventing disorders associated
